## 構 築 生 活

我們把居住空間的架構回歸生活的本質，除去多餘繁瑣的裝飾型態用簡單的系統組構出生活的場景。

我們保留原有建築結構的天花系統利用木質框架型態延續空間關係，整體材料架構以建築結構的水泥色調為核心，透過溫潤的木質感平衡空間中的溫度；設計的主軸在於創造時光及場域的載體，在這之中我們呼應自然環境的休閒氛圍，圍繞居住者生活的累積。

我們希望在室內空間中體驗到環境與室內的關係、建築與生活之中的連結、生活軌跡的紀錄、一個能真正放鬆沉澱場域，在設計中融合理性的軸線安排，及純粹精煉後所留下的空間氛圍。

We return the structure of living space to the essence of life,  
remove redundant and fussy decorative patterns and use simple systems to build scenes of life.  
Keep the ceiling system of the original building structure and use the wood frame type to continue the spatial relationship.  
The overall material structure takes the cement tone of the building structure as the core and balances the temperature in the space  
through the warm wood texture. The main axis of the design is to create the carrier of time and field,  
in which we echo the leisure atmosphere of natural environment and focus on the accumulation of residents' life.

We keep the ceiling system of the original building structure and use the wood frame type to continue the spatial relationship. The overall material structure takes the cement tone of the building structure as the core and balances the temperature in the space through the warm wood texture.

We hope to experience the relationship between environment and interior, the connection between architecture and life, the record of life track, an axis arrangement that can really relax the settling field, incorporate rationality into the design, and the space atmosphere left by pure refinement.

把居住空間的架構回歸生活的本質，  
除去多餘繁瑣的裝飾型態用簡單的系統組構出生活的場景。
