空間層疊	Kuo-Feng Tseng
[空間層疊] 保有原建物中的樑柱結構部分作為空間主軸，並利用櫃的量體與原始結構塊體交互結合，讓空間層次更為豐富。量體的部分皆低於結構樑塊體下，以白色量體與灰綠色結構塊體作為區分，光影的變化使空間更具有戲劇性。將客廳、多功能室、餐廳三個空間營造穿透、開放、串聯的結合，不只使空間開闊空氣及光線的流動也相呼應著。	[Superimposed space] Retains the beam column structure of the original construction as the space spindle and uses the cabinet's volume and original structure interaction to combine the space layer into a richer level of space. The parts of the volume are lower than that of the beam column structure mass. The change of light shadow with white volume and gray-green structure in the space makes it more dramatically attractive and gives it the possibility to create and connect the three spaces which are the living room, the multifunction activity room and the dining room. This not only opens the space but also echoes the flow of light.
